West Nile Virus Detected in Dawson County

West Nile virus (WNV) has been detected in a mosquito pool in the Two Rivers Public Health Department district. Additionally, there has been 1 confirmed equine WNV case in the district. WNV can be transmitted to humans through mosquito bites. About 1 in 5 people who are infected with WNV develop a fever with other symptoms such as headache, body aches, joint pains, vomiting, diarrhea, or rash. Most people with febrile illness due to WNV recover completely, but fatigue and weakness can last for weeks or months. Serious symptoms occur in less than 1% of infected people. At this time there have been no confirmed human cases of West Nile Virus in the Two Rivers district.

To prevent mosquito bites, one should practice good mosquito control by removing standing water, using EPA-registered insect repellents, and by wearing long-sleeved pants and shirts. There is no WNV vaccine for humans.

Two Rivers Public Health's regular office hours are 8:00 a.m. to 4:30 p.m. Monday through Friday. The office can be contacted at 888-669-7154.

ABOUT TWO RIVERS PUBLIC HEALTH DEPARTMENT

Two Rivers Public Health Department engages collaborative partners, community leaders and the public to promote healthy lifestyles, provide preventative education, assure environmental quality, and create more healthy and safe communities for all who live within the district.
